

Supplementary Material

Circulating microRNAs expression profile in plasma of patients with Gestational Diabetes Mellitus

Supplementary Figure 1

Supplementary Figure 1. MicroRNAs detection rate and normalization strategy. (A) Detected microRNAs percentage (left panel) and absolute number (right panel) among 384 microRNAs analyzed in n=4 non-diabetic controls and n=4 GDM patients plasma samples. (B) Stability graph of Global Mean Normalization (reported as median Ct) across 8 plasma samples analyzed. (C) Stability graph of housekeeping microRNAs miR-320 and miR-374a identified using NormFinder algorithm; data are reported as raw Cycle Threshold (Ct).
